

ARTEMIO FRANCHI STADIUM

Following the effort to **clean and preserve** the existing structure, our proposal is not just to liberate the Nervi structure, but also to **reactivate the portico as a generator for the city**, providing an inclusive and open urban space which connects back to the garden.

We inhabit the inner bay of the nervi structural colonnade, providing an **open passage** at the perimeter, to promote a vibrant interaction between the portico program and the new public atrium, open throughout the week.

From the basement infill level, where we **reinhabit the existing structures**, to the raised public plateau at level 03, which is aligned the aggetto of the Maratona tower, each new element is **calibrated to the existing architecture**.

Our hope is to **give back the grandstands** to the citizens, freeing them to become a stage for performance, extended sports viewership, or just a **retreat within the Franchi**.

**NEW INFRASTRUCTURE** | Free Standing Extension  
Level 04 | Roof Plan 1:500

**IN BETWEEN NEW AND OLD** | Cavea  
section BB 1:200
